

Wentworth Greenhouses

2010 Annuals

All 4-Pack & 6-Pack Annuals are \$1.99 each
Buy Any 9 Packs and Receive 10th Pack FREE.

Soil Preparation

Soil testing is highly recommended. Your local extension office can provide this service for a minimal charge. Prepare flower beds by spading deeply. Add a 1-2 inch layer of compost to existing beds and mix in thoroughly. Rake surface smooth and the bed will be ready for plants.

* Best Soil Contains:

10/20% Clay + 25-60% Silt + 20/50% Sand = Loam

* 1/3 of the final mix should be organic matter (peat moss, manure, bark, compost).

* Mulch:

A 2-3" layer around will help prevent some weeds, also will retain moisture in the soil longer and maintain a more stable soil temperature.

* Soil pH affects plant metabolism. Optimum pH for annuals is between 6.0 and 7.5.

- Lower pH by adding soil sulphur.

- Raise pH by adding lime.

- When adding lime in large amounts add in stages and cultivate into soil.

Pounds of Limestone needed Per 100 sq. feet to raise pH to 6.5

Current pH	(soil type)	Sandy Loam	Loam	Clay Loam
4.0		11.5	16	23
4.5		9.5	13.5	19.5
5.0		8	10.5	15
5.5		6	8	10.5
6.0		3	4	5.5
